<del> Hello Web Development </del>
```

Hyperlinks : a is the tag using for creating hyper links

a tag is having a special attribute "href" giving some hyper reference

```
<a href="reference path" > Link Name </a>
<a href="https://www.google.com" > Google </a>
```

hyper links can able to load pdfs html and other sources.  
hyperlinks by default having blue color and underline style.

If you want to open a new tab for hyperlink we need to provide some special attribute

target="\_blank"

```
<a href="https://www.google.com/"> Google </a>
```

```
<a href="https://sathyatech.com/" target="_blank">sathyatech </a>
```

iframe : iframe is a tag using for add web pages in a web page

Note :

i frames are not recommended for RIA(Rich Internet application )

Most of the case avoid iframe

```
<iframe src="https://sathyatech.com/" style="width: 47%; height: 400px; border: 2px solid green;"></iframe>
```

here src(source path) is a special attribute

center tag : make text in center in wen page

```
<center><h1> Web development </h1></center>
```

label tag : create a label in web page

button tag : create a button in web page

```
<h1> Web development </h1>
```

```
<center><h1 style="background-color: yellow"> Web development </h1></center>
```

```
<center><label style="background-color: red; color: white">Hello Web Development</label></center>
```

```
<button style="background-color: green; color: white"> Click Me</button>
```

List Items :

there are three type of list items

1. ordered list
2. un ordered list
3. definition list

1. ordered list    `ol`

```
<ol >    <li>List Item</li> >   <li>List Item </li> > <li> List  
Item</li> >    </ol>
```

1. Unordered list    `ul`

```
<ul >    <li>List Item</li> >   <li>List Item </li> > <li> List  
Item</li> >    </ul>
```

`li` : list item
